

Francis Fitzgerald D. Ruta

(+63) 917 716 1661 | Francis.Ruta87@gmail.com

Full-Stack Python Developer with 5+ years of experience designing scalable web applications, and building RESTful APIs. Skilled across Python (Flask, Django), JavaScript/React, and database management. Proven track record of optimizing backend services, creating new features, leading test automation initiatives, and communicating effectively with cross-functional remote teams.

Technical Skills

- Languages: Python (2/3), JavaScript (ES7+), TypeScript, SQL, HTML5/CSS3, PHP
- Frameworks & Libraries: Flask, Django, FastAPI, React.js, Next.js, Express.js, Node.js, Bootstrap 3/4, Pytest
- Databases & Tools: PostgreSQL, MySQL, RESTful APIs, Docker, AWS (EC2, SES, Secrets Manager), Git Version Control, Swagger, Linux

Professional Experience

HX Works

Back-End Developer

Application Development for Vineskills

US-based Company (Remote)

March 2025 - June 2026

Vineskills is a legal technology consulting firm that helps law firms optimize case management and streamline operations through custom Filevine implementation, workflows, and third-party technology integrations.

As part of the development team employed by **HX Works**, I contributed to the development, maintenance, and enhancement of these three key applications integrated within Vineskills: (1) Finance Connect for QuickBooks, (2) Optimization Toolbox, and (3) Smart Mailroom.

Duties and Responsibilities:

- **Designed, optimized, and maintained** backend logic and **RESTful API** integrations (Filevine, QuickBooks) for key legal tech SaaS applications: Finance Connect, Optimization Toolbox, and Smart Mailroom.
- Enhanced system reliability and reduced production incidents by serving as **primary developer** for **error monitoring, debugging, and incident response**.
- Upgraded testing infrastructure by introducing automated unit and integration tests using **Pytest**.

- Accelerated development speed and team productivity by incorporating **AI-assisted coding tools (Claude, Gemini, ChatGPT)** and maintaining proactive, asynchronous communication workflows.

Tech Stack: Python, Flask, Linux, Gitlab, Pytest, PostgreSQL, Trello, Claude, Gemini, ChatGPT, Filevine and Quickbooks API

Evren
Full-Stack Developer

Singapore-based Company (Remote)
February 2023 - November 2024

Evren provides enterprise endpoint security solutions to protect sensitive data and manage contractor compliance across distributed teams. Its core platform, EvrenOS, allows administrators to centrally configure device permissions and security policies via a web administration dashboard.

Duties and Responsibilities:

- Modernized administration platform UI by **migrating legacy Flask template interfaces to React.js**, boosting system performance and usability.
- **Refactored core Python services** from **synchronous to asynchronous** execution to optimize execution speed and system throughput.
- Built new administration page features and backend capabilities using **REST API** endpoints secured with AWS Secrets Manager.
- Monitored application health, performed root-cause analysis, and resolved system defects using Logz.io.
- Documented system architecture and API specifications using Swagger/OpenAPI to standardize cross-team development.

Tech Stack: Python, Flask, Github, Github Actions, ReactJS, AWS, Swagger, Docker, Jira, PostgreSQL, Linux

IPEdge LLC Project
Full-Stack Developer (Contract)

Texas, US-based Company (Remote)
September 2022 - December 2022

IPEdge is an intellectual property law firm specializing in patent monetization, licensing, and portfolio strategy. Joined a remote development team tasked with taking over and enhancing an existing core web application to improve its functionality, maintainability, and alignment with firm operations.

Duties and Responsibilities:

- Enhanced an internal intellectual property management application by developing **full-stack** features using Python, Flask, React.js, and Bootstrap.
- Analyzed legacy codebases with limited documentation and generated **updated technical docs** to simplify maintenance.
- Performed **end-to-end testing, bug tracking, and code quality maintenance** via GitHub Projects.

Tech Stack: Python, Flask, Github, Github Project Board, ReactJS, Javascript ES6+, Bootstrap

Ingenuity

March 2019 - September 2022

Front-End & Back-End Developer

(Transitioned from an on-site to a hybrid work setup)

Ingenuity is a software engineering and product design firm specializing in custom software development, UX/UI strategy, enterprise digital transformation, and intelligent automation systems across industries like fintech, healthcare, and utilities.

Projects worked on under Ingenuity

Navibord

Australia-based Client

Back-End Developer

July 2022 - September 2022

Navibord is a web-based migration platform that recommends tailored Australian immigration pathways based on user profiles and occupation data. It also features built-in mentor-mentee networking tools to foster community engagement and professional guidance.

Duties and Responsibilities:

- **Designed, developed, and maintained Node.js / Express.js REST API endpoints** powering core migration pathways, recommendation logic, and community networking features.
- Modeled system database structures and clarified complex business rules by constructing detailed **Entity Relationship Diagrams (ERDs)**.
- **Collaborated directly with international stakeholders** to translate business requirements into scalable technical solutions.

Tech Stack: Node.js, Express.js, React.js (Next.js), AWS (EC2, SES)

NCCC Continuous Auditing (CA) System

Davao City, Philippines

Full-Stack Developer

A system put into place to quickly analyze, identify, and address immediate issues, causes, and opportunities for process improvement regarding auditing procedures and risk management, providing auditors timely report of “red flag transactions” for immediate resolutions.

Duties and Responsibilities:

- **Engineered custom Role-Based Access Control (RBAC):** Designed and implemented a granular User Group Permission module in Django to enforce strict role-based authorization for auditing workflows.
- **Delivered Pixel-Perfect, Responsive UIs:** Built responsive web interfaces across desktop, tablet, and mobile devices matching approved UI/UX designs and user experience requirements.
- **Served as Key Technical & Subject Matter Expert:** Guided stakeholders on system functionality,

auditing workflows, and architectural limitations.

- **Provided End-User Training & Post-Launch Support:** Conducted a 2-day on-site training program for end users, gathered operational feedback, and provided ongoing post-deployment maintenance and system enhancements.

Tech Stack: Python, Bootstrap, Django, Docker, Knime

Serverplus

Utah-based client

Back-End Developer

A customer support issue tracking and ticket management system designed to log, track, and resolve user-reported issues through structured workflows.

Duties and Responsibilities:

- **Led full system upgrade and migration from Python 2.7 to Python 3**, significantly improving security, system compatibility, and maintainability.
- **Served as primary client contact**, managing task estimation, daily updates, and cross-time-zone team coordination

Tech Stack: Python, Pyramid Framework

Connect Trades LTD

Canada-based client

Full-Stack Developer

A web business directory connecting residential and commercial services and products to the home/business owner. It is a search service for local contractors, trades, laborers, suppliers, students, and retail merchants.

Duties and Responsibilities:

- Served as a **Support Developer**, and **later promoted to Full Stack Lead Developer** for the project, taking on increased technical and coordination responsibilities.
- Acted as the **primary point of contact for client communication**, providing consistent updates, clarifying requirements, and managing incoming feature requests.
- **Evaluated and prioritized client requests** based on business value, budget constraints, timelines, and long-term product viability to ensure alignment with overall project goals.
- Developed **responsive web interfaces** to ensure optimal usability across desktop, tablet, and mobile devices.

Tech Stack: Python, Django, Bootstrap, JQuery

Safe Davao QR (SDQR) (Web side)

Davao City, Philippines

Back-End Developer

Safe Davao QR was a city-wide public health platform developed for rapid COVID-19 contact tracing and exposure flagging via QR code registration. It later evolved into a centralized vaccination management system to track immunization status and coordinate distribution.

Duties and Responsibilities:

- Built high-throughput **REST APIs and online form processing systems** for health declarations and vaccine consent forms during emergency pandemic rollout.
- **Engineered automated data ingestion utilities** to parse and migrate bulk Excel records into production databases.

Tech Stack: Python, Django, REST API, Docker

Learning Management System (LMS)
Back-End Developer

Dole Philippines Inc., Davao City Office

A learning management system built on the Open edX platform to deliver training and educational content to DOLE employees in a more engaging, interactive, and accessible format while reducing reliance on paper-based materials.

Duties and Responsibilities:

- **Conducted a deep-dive analysis** of organizational training needs by interviewing Dole PH employees and reviewing existing knowledge transfer processes and workflows.
- Identified requirements and contributed to the foundation of a scalable approach for future LMS-based projects for Ingenuity.
- Documented the setup and configuration processes for the Open edX platform to support knowledge sharing and system reproducibility.

Tech Stack: Open edX

Food Medley
Back-End Developer

US-based client

A mobile cooking recipe application with shopping cart functionality, rating system, and recommender system.

Duties and Responsibilities:

- **Architected database schemas and application user flows** to support core cooking recipe features, shopping cart functionality, and user rating mechanisms.
- **Designed and integrated REST API endpoints** to ensure seamless data exchange between back-end services and the mobile application interface.
- Tested and validated cross-platform mobile app performance using **Expo Go** emulators.

Tech Stack: Node.js, React.js, TypeScript, Expo Go, REST APIs

On-the-Job Training

DavaoDirect Tourism Mobile Application

Internship project under Ingenuity

Davao City, Philippines

April 2017 - May 2017 (240 Hours)

Duties and Responsibilities:

- Underwent two (2) weeks of intense training for Python in Django web framework and front-end development refreshers
- Tasked to form a team and pitch an idea for a web-based Davao tourism application to the upper management and owner of the company
- Learned how to use Appcelerator Titanium within a short period of time to develop a mobile application version of the pitched web-based idea, as suggested by the proprietor
- Served in the front-end developer side of the team

Undergraduate Relevant Projects

Action Recommendation System for Farm Operations Using Arduino in the Internet of Things (IoT)

Davao City, Philippines

Undergrad Thesis

A duo thesis project that uses Arduino technology to collect data at the farmland. A web application that will give action recommendations to the farmer based on the collected data.

Duties and Responsibilities:

- Conducted field research by identifying and coordinating with farms suitable for project implementation, including scheduling meetings with farm owners.
- Designed and programmed an Arduino-based device to collect and record environmental data from farm settings.
- Took a leading role in organizing, drafting, and managing the thesis documentation and overall research paper.
- Served as lead presenter during the final thesis defense, communicating project objectives, methodology, and findings to evaluators.

Web-based Merchandising System with Inventory, Sales, and Purchasing

Davao City, Philippines

Undergrad Project for System Analysis and Design (SAD)

Duties and Responsibilities:

- Led outreach efforts by engaging with business owners to secure partnerships and obtain approval for system development projects.
- Served as Lead Front-End Developer, primarily utilizing Bootstrap v3 to design and implement the user interface of the system.
- Managed the majority of the System Analysis and Design (SAD) documentation, ensuring

- completeness and alignment with project requirements.
- Acted as Lead Presenter for the project, effectively communicating system objectives, design, and outcomes to evaluators.

Education

Bachelor of Science in Information Technology
Ateneo de Davao University

October 2018

Upper-Primary to Secondary level
Dole Philippines School

March 2014
